

**Product Code**

This is the first section of the description which outlines the product type, formulation, density, number of sides coated with adhesive and protective liner. See the following example.

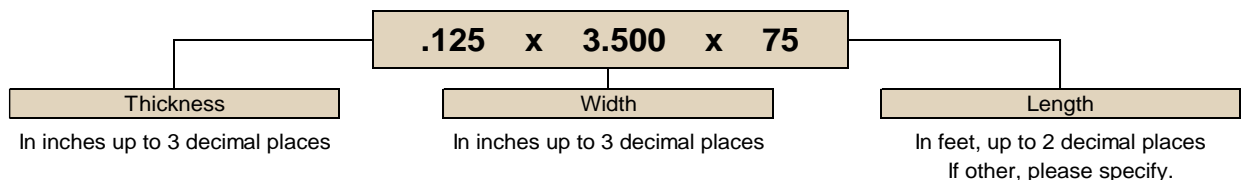

**Non-Standard Additions**

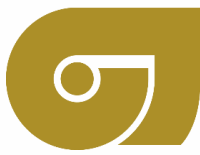

This is the additional information which is included at the end of the code to specify other needs. Please note the proper order for consistency.

**Dimensions**

Following the product designation code in the part description are the dimensions of the product. The proper order is thickness, width and length. Note: Dimensions are sometimes not used -e.g. odd shaped die cut parts, some customer supplied materials, etc. The following example illustrates dimensions:

## Adhesive Requirements
